

How to Install Your New Lawn

Remove all building waste & weeds.

Spread a free draining soil to a depth of 7-15cm (roots can penetrate much deeper) or loosen ground and mix in appropriate soil conditioners. For sandy soils, simply mix in organic material and rotary hoe.

Level the surface using a screeding board, lawn leveller or similar device.

In hot months, moisten the soil but do not make the soil too wet. Do not lay your turf on hot, dry soil.

Lay the Turf as soon as possible after delivery.

On hot days, lay a section of the buffalo grass and lightly water. Repeat until all turf is laid. On cool days, the Turf can be laid all at once. Roll and water thoroughly within one hour of laying turf.

Water thoroughly for 7-10 days or until the lawn is established take care that the water is saturating the soil beneath the turf. In colder months, the lawn will take longer to establish. The turf should not dry out until roots are established.

When the soil has firmed and the turf has rooted down, usually 2-3 weeks after laying (longer during winter), mow lightly to tidy up your new lawn.
